

Abstract of the Invention

A spectator experience corresponding to an occurrence of one or more games or events is generated based on each associated occurrence. The occurrence of a game or event varies in response to contributions and/or interactions of one or more participants of the game or event. The spectator experience enables users thereof to observe an augmented version of the game or event, such as by implementing enhanced viewpoint controls and/or other spectator related effects. In a particular aspect, the spectator experience can provide an indication of the spectators' presence, which is made available to the spectators and/or to the participants of the game.

10

11. *Method for generating a spectator experience corresponding to an occurrence of one or more games or events, the method comprising: receiving a plurality of contributions and/or interactions from one or more participants of the game or event; generating an augmented version of the game or event in response to the contributions and/or interactions; and providing the augmented version to a user.*
